

# VIBROSOILER® MID-ROW RIPPER

## IT'S NOT RIPPING... IT'S ROOT ZONE MANAGEMENT

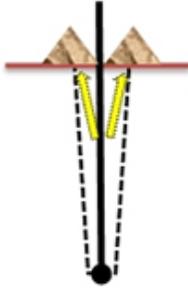

- \* 5X Better Soil Breakout Than a Standard Ripper
- \* Water Savings and Enhanced Drainage
- \* Superior Mixing of Amendments in the Root Zone
- \* Rip More Acres Per Day

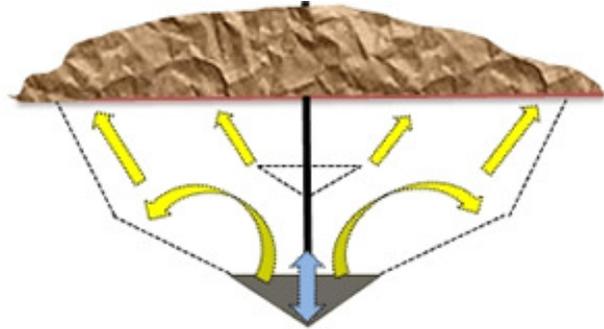

# VIBROSOILER® MID-ROW RIPPER

The Vibrosoiler Mid-Row Ripper is a twin ripper equipped with patented vibrating winged shanks that cycle up to twice per second. This action creates a soil structure breakout that is unmatched by any conventional ripper.

## Conventional Ripper

Poor breakout with limited benefit. Requires ripping very close to the tree or vine.

## Vibrating Wing - Removes Soil Compaction

The Vibrosoiler® provides 5 times the soil breakout from that of a standard ripper with minimal root pruning and lateral breakout to within 6 - 8" of the vine or tree. This removes tractor compaction and the plow pan and increases water and nutrient penetration into the soil profile.

***"The new best way for planting orchards and vineyards, period."***

- John Duarte of Duarte Nursery

## Features

- 24—32" ripping depth
- Adjustable from 3-1/2'—12'
- Orchard and Vineyard models available

Down Position

Up Position

## Benefits

- Better water infiltration
- Up to 48" of soil breakout per shank
- Flow of soil over wing creates a tumbling action that can be used to mix amendments and fertilizer at the root zone
- Pulls faster and easier than a conventional ripper
- Deeper rooting
